

System Layers (Court Context)

- Append-only hash chain
- Offline verifier (verify-run.js)
- CI gate on exit code only

Mathematical integrity • No discretion

Key Invariants:

- No layer can silently expand its authority
- Observation does not imply approval
- Verification proves integrity, not intent
- Governance changes require explicit versioned release

Notes (Neutral): Observation artifacts are optional and non-authoritative; verification proves integrity, not intent; governance semantics are versioned and may change only by explicit release.
